

NONUS – RESPONSIVE TUMBLR THEME

1. Theme – installation

1.1. Please open index.html file in /NonusTumblrTheme/ folder with your favourite text editor : Notepad++, Php Storm, Sublime Text etc...

1.2. Copy all HTML content code from index.html file

The screenshot shows a text editor window titled "Edit HTML" with a dark background. The editor contains HTML code for an index.html file. A context menu is open over the code, displaying various actions with their keyboard shortcuts. The "Kopiuj" (Copy) option is highlighted in blue. The code visible in the background includes DOCTYPE declarations, meta tags for description, author, and viewport, and link tags for stylesheets and icons.

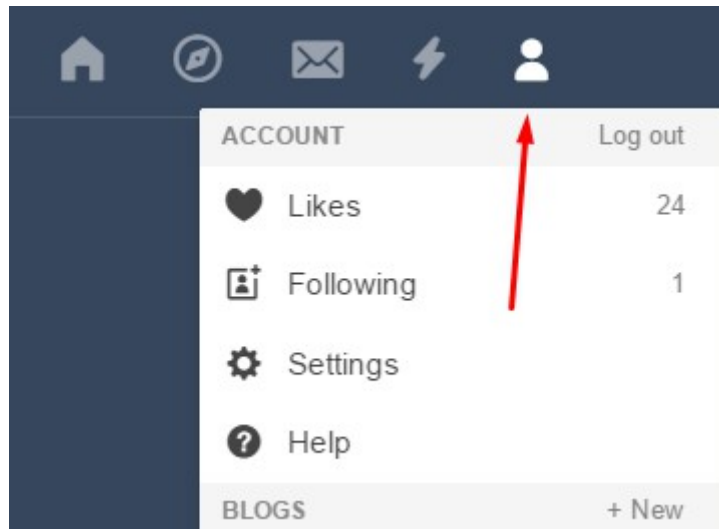

```

43 <meta name="image:Slide3" content="http://static.tumblr.com/b0mdxdt/du5npsicu
/nonus-large-image-3.jpg"/>
```

2. Mobile View

2.1. Our theme has default mobile layout. We have own mobile design, so you have to disable standard mobile layout. To do this, please click **Advanced Options** in the bottom of the side.

2.2. Click or disable use optimized mobile layout. To do this you have to disable option **Use default mobile theme**

2.3. Finally, please click **Save** button. Now you have your own mobile layout.

3. Theme options

3.1. After installing the theme you are able to add a text description to the options. Now the text fields are empty. To change it, please scroll down on the tumblr theme page and fill the following fields:

- Background Description
- Number of Columns
- Theme Description
- Disqus
- Blog username
- Blog username Website

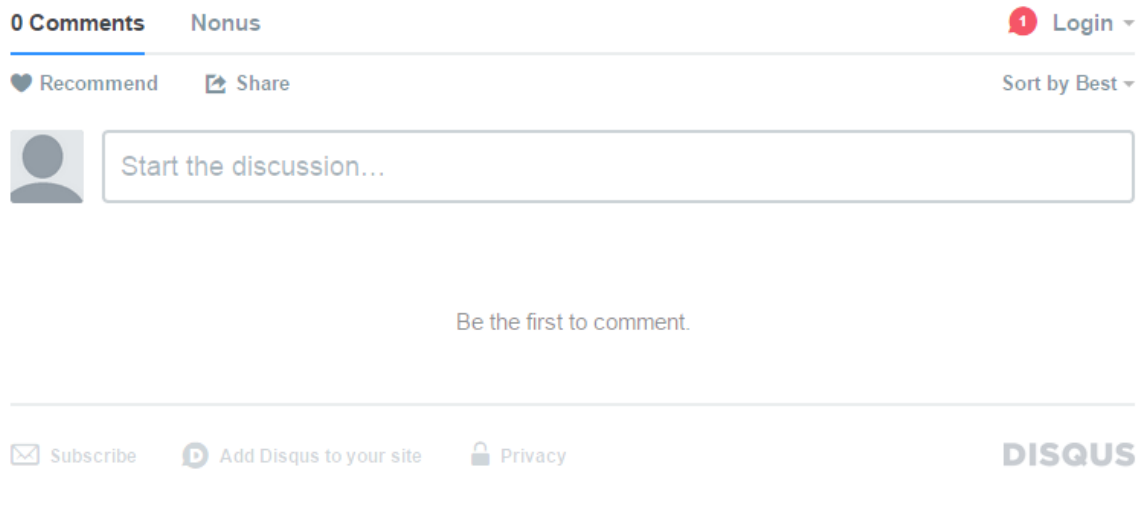

Background Description
We are super-duper awesome design studio
NumberofColumns
6
Theme Description

Blog Username Website
http://createit.pl

3.2. The text in the fields will be displaying on the different parts of the theme. Above is the example how should looks like the fields.

*For example Background Description – is the text that you want to see on the Slider.

*Number of Columns is the variable responsible for the columns in Masonry Blog.

*Disqus – this is a comments system. If you registered before into this system, you should have your own disqus short name. This information you can put it here if you want to work it.

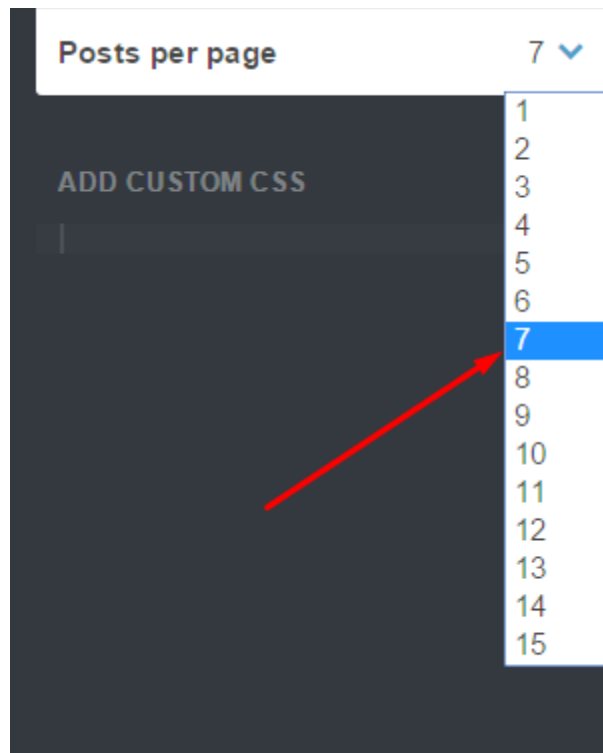

*Theme Description – this description will be in the footer on the bottom part of the page.

*Blog Username and *Blog Username Website are the additional fields.

3.3. In the top of the administrative panel in tumblr you have an option like Avatar. Click on the option and choose the author image that you want to see on the page. It should be small picture with the image of author's blog.

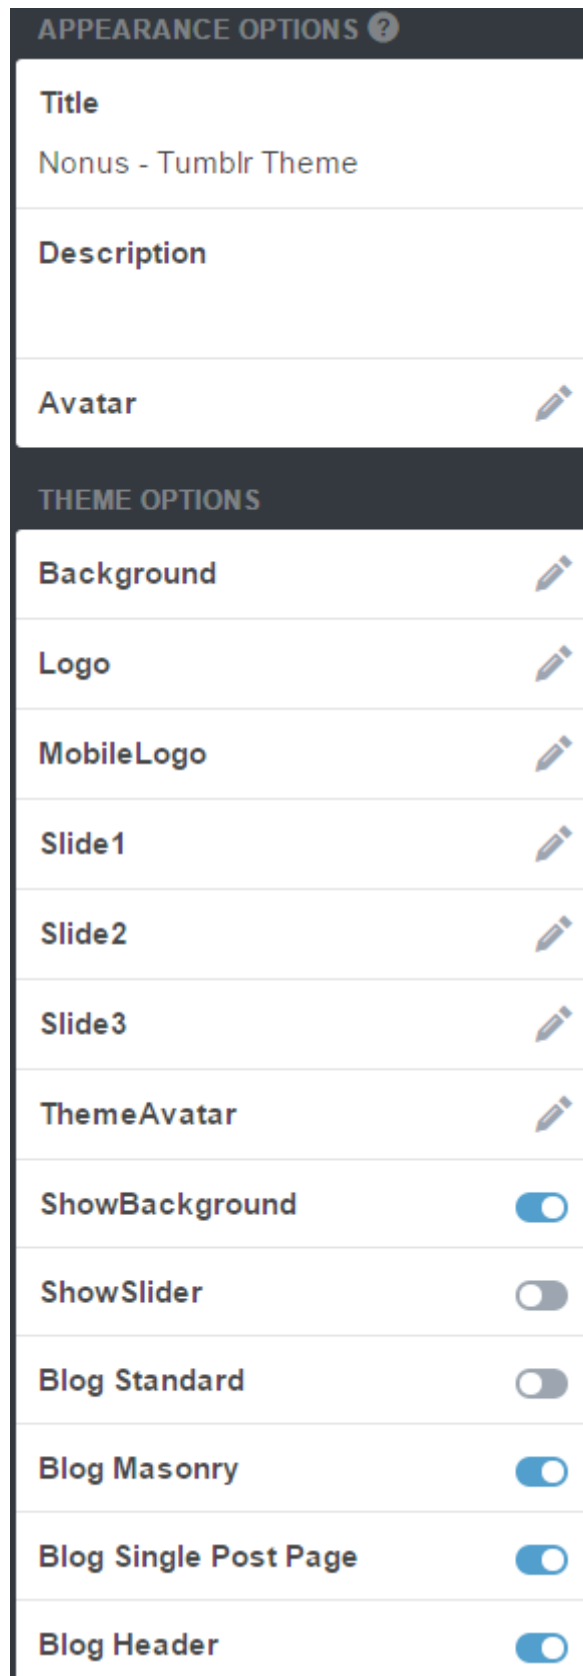

3.4. The most important thing is to set the how many posts should be displayed on the page. For do this, please go the the **Advanced Options** on the bottom of the page and set the Posts per page for 6. For now you have 6 posts on every page. You can change it. How many posts should be displayed is depending from You.

3.5. The options **Open links in new window** should be disabled.

3.6. In Theme options in the edit theme panel you have options like Logo. If you do not want to have logo like in our theme please choose the another logo.

3.7. Nonus Tumblr Theme has a following lists of components / options that you can use. The lists of available options is on the picture:

3.8. We have options to change the type of the blog: Masonry and Default. Also we have options to blog header, to show the slider on the main page and to show the background on the main

page. You can modify all of the options if you want. If you want to change something please do it and then click **Update** and **Save** button.

3.9. If you did everything you can do the last thing. You have to enable options in your tumblr theme to allow the customers to send you a messages. Like you see on the top of the page is the options:

HOME ARCHIVES RSS ASK ME 

To activate this options, please go to the your main **Tumblr Dashboard, Edit appearance** and choose Let people ask questions and then **Allow anonymouse questions**.

Ask

Let people ask questions

Send your audience to [/ask](#) to ask you questions.

Ask page title

Ask me anything

Allow anonymous questions

4. Icons

4.1. Icons – we have included 360+ font icons. Awesome icons – <http://fontawesome.io/icons/>

5. Animate.css – we use this library to make an effect on the posts. Animate css has a lot of the effect made using css.

6. Javascript

6.1. Javascript library and files

In main.js we implement all functions calls. This theme uses the following Javascript files:

- Bootstrap v3 framework – powerful front-end framework for faster and easier web development
- jQuery – a fast javascript library
- jQuery Appear – this plugin call function when elements is in viewport
- jQuery easing
- jQuery browser
- Modernizr
- Device.js
- Isotope and Masonry plugin
- OWL slider carousel

6.2. Sources & Credits – the following sourced and files have been used to build up this theme:

- Twitter Bootstrap – <http://twitter.github.com/bootstrap/>
- jQuery Plugin – <http://www.jquery.com>
